

Fixed Assets - Overview Brochure

Infor CloudSuite Industrial (SyteLine) ERP Fixed Assets

Full control over your entire asset picture — from acquisition to retirement and replacement planning — is crucial when it comes to managing assets. Infor CloudSuite Industrial (SyteLine) ERP Fixed Assets, a complete capital asset information and management system allows you to manage your assets through their entire lifecycle.

With user-defined asset numbers and asset classes, you create comprehensive asset definitions with details on location, insurance, purchase information, serial and/or model number, and manufacturer.

Original purchase cost and improvement costs provide the basis for depreciation calculations under seven predefined depreciation methods and additional user-defined methods. Multiple depreciation schedules may be maintained for each asset. Monthly and year-end depreciation calculations are automatic, as well as calculations for partial depreciation and automatic crossover between methods. Asset disposals and transfers calculate gain or loss in the transaction.

	Asset Number
1	Building
2	DRL-10
3	HAL-2001
4	Land
5	MC-300-1
